PICTURE ROCK

It's no mystery why this unusual stone is called Picture Rock. Scenes of hills & valleys, deserts, sand dunes, cactus, trees, cloudy skies, and even sea-scapes can be found in the patterns of this Picture Rock from the Kalahari Desert. Bands of harder dark Sandstone containing higher percentages of Iron and Silica form the patterns on a background of yellow Sandstone. Notice that the dark lines which form the patterns are slightly raised. This is because the stone in those layers is slightly harder than the yellow Sandstone and is not ground away easily.
