APACHE TEAR

Legend tells of the great battle in which many of the braves of the Pineal Apache tribe were killed. The Apache women mourned their fallen warriors so intensely that their tears became embedded in the desert stone as nuggets of black volcanic glass. The mineral name for Apache Tear is Obsidian. It is a natural volcanic glass and has been used for centuries in primitive societies for both decoration and tools. It can be chipped to a very sharp cutting edge and so was also used to make knives, scrapers, etc.
