SCULPTURED COPPER

The Keweenaw Peninsula of northern Michigan is the site of vast Copper mining operations. Some mines even extend out under Lake Michigan. Raw native Copper from these mines is used to "sculpt" these unique and fascinating shapes. Like the elements Iron or Gold, Copper finds many uses in our modern society; in electrical wires, copper pennies and is mixed with other metals to form such alloys as Brass and Bronze. Copper was well known in ancient times and used in ornaments and in the manufacture of weapons.
