NAZCA STONE

Thousands of years before white men arrived in South America, an unknown civilization created huge animal, geometric and humanoid figures in the flat desert near Nazca, Peru. Animal figures include a Hummingbird, Monkey, Whale, Lizard and Deer. Some figures are 400-500 feet long! Hundreds of geometric lines and figures stretch for miles across the black desert plain. Incredibly, the shapes and figures are only visible from high in the air above the desert causing modern investigators to wonder how the Nazca people created such huge and detailed art works if they were unable to fly, and for whom! These stones are "laser-cut" in Peru and depict many of the figures left by the ancient Nazca culture.
